## **FORWARD**

*(Form the first edition)*

The human, institutional and collection resources required for the assessment of the magnitude and distribution of biodiversity at its various levels are extremely diverse. Many of the key resources, including men and materials have, however, come to be concentrated in Europe and North America as a result of the history of the exploration of Earth's biodiversity although an increasing number of countries, including India, have made significant progress in developing their man power and collection resources.

Ecological reference collections and their associated libraries and staff are the major tools necessary for basic investigation and assessment of biodiversity. The advent of computerized information handling and manipulation, coupled with molecular technology means that such reference collections will become strongly supplemented with extensive and permanent recorded observations, images and genetic data.

The imperative need for a brief but comprehensive volume, bringing under one cover information on various specialists on invertebrate groups and their areas of specialization as also the details of the various invertebrate depositories in India has been long felt by all interested in such enquiries. At present, it is necessary to search through voluminous transactions and scientific journals to obtain any general acquaintance with what has already been ascertained regarding the fauna of India and but for a few favourably placed, even these are inaccessible. The publication of a directory which brings together all available information in sufficient detail for the discrimination and use of students of various groups of invertebrates has therefore been long considered a desirable goal. The increasing attention now paid to biodiversity calls, more imperatively, for the fulfillment of this desideratum.

The present work is the result of the sustained efforts of Dr. B.A. Daniel, Zoo Outreach Organisation, Coimbatore, who has been ably supported and encouraged by Ms. Sally Walker. I am confident that this timely volume will enhance communication and co-operation amongst invertebrate researches in India and abroad.

## OBJECTIVES OF ICINSA

*The major objectives of ICINSA are:*

- ◆ *To promote invertebrate conservation in South Asia*
- ◆ *To establish and maintain database invertebrate projects in South Asia*
- ◆ *To link all network members and make available the details of on going research projects in the region*
- ◆ *To develop consulting expertise for all invertebrate groups for the region*
- ◆ *To encourage South Asian scientists to formulate respective National Action Plans to promote invertebrate conservation*
